**DETAILED ACTION*****Status of the Claims***

Claims 1-29 are currently pending.

***Election/Restrictions***

**Restriction to a Common core structure resulting from X and Y selection AND  
Further Election of Species of a Single Chemical Compound Identified by  
Chemical Formula For Purposes of Search**

The presently claimed invention (e.g. claim 1) is drawn to independent and/or patentably distinct beta amino acids which contain variable generic core structures (and resulting species) which represent different inventions within Formula I:

Wherein: X and Y are combined together: to form a saturated or unsaturated; substituted or unsubstituted; cycloalkyl or cycloalkenyl; homocyclic or heterocyclic (e.g. having one or more Nitrogens).

The Beta amino acids described within formula I are independent and/or patentably distinct since:

a. there is a lack of sufficient core (e.g. fixed) core structure to elicit a common activity; and/or

Art Unit: 1639

- b. formula I encompasses multiple compounds of variable chemical structure and/or physical/biological/chemical properties which are capable of separate manufacture and/or use; and/or
- c. formula I is drawn to diverse chemical structures which require different/nondivergent and separately burdensome manual/computer structure, classification and bibliographic searches; and/or
- d. the formula I compounds are unduly burdensome to examine together since different core structure resulting from X and Y selection will require different considerations under 35 USC 112 and a reference to one core generic or species therein will not be applicable as prior art against a different core structure compound or species; and/or
- e. the Formula I compounds encompass separately classified compounds for example:
  - Imidazoles (e.g. class 548 subclass 335.1);
  - Cyclopentane (e.g. class 560, subclass 121;
  - Pyrroles (e.g. class 548, subclass 400); and
  - Pyrazines (e.g. class 544, subclass 336.

Applicant is required under 35 U.S.C. 121 to elect:

- A. A BETA AMINO ACID GENERIC WHICH COMPRISES A SINGLE  
GENERIC CYCLIC CORE STRUCTURE (E.G. DEFINED VALUES FOR X AND Y)  
AND
- B. A SINGLE DISCLOSED OR CLAIMED COMPOUND (IDENTIFIED BY  
CHEMICAL STRUCTURE) WHICH IS WITHIN THE ELECTED GENERIC CORE  
STRUCTURE

for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. .

Applicant is advised that a reply to this requirement **must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added.**

An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a proper generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1639

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
